AIP EDITORIAL AND COMPOSITION STAFF: Janis Bennett, *Editorial Supervisor*; Yin Ping Ho, *Chief Copy Editor*; Andrea Zeitler, *Copy Editor*; Barbara Maki, *Keyboarding Supervisor*; Honey West, *Paste-up Supervisor*; Dianne Longi, *Production Control Supervisor*; Colleen Johnson, *Production Assistant*

*Applied Physics Letters* is published weekly by the American Institute of Physics with the cooperation of the American Physical Society and the Optical Society of America. Its purpose is to provide rapid dissemination of new developments in fields regularly covered by the *Journal of Applied Physics*.

## Information for Contributors

**Submit manuscripts** to Gilbert J. Perlow, Editor, *Applied Physics Letters*, Argonne National Laboratory, P. O. Box 296, Argonne, IL 60439. Submission is a representation that the manuscript has not been published previously nor currently submitted for publication elsewhere. The manuscript should be accompanied by a statement transferring copyright from the authors (or their employers—whichever holds the copyright) to AIP; a suitable form for copyright transfer is occasionally printed in the back of this journal and is available from the Editor's office or AIP. This written transfer of copyright, which previously was assumed to be implicit in the act of submitting a manuscript, is necessary under the 1978 U.S. copyright law in order for AIP to continue disseminating physics research results as widely as possible. Further information may be obtained from AIP.

**Publication Charge:** To support the cost of wide dissemination of research results through publication of journal pages and production of a data base of articles, the author's institution is requested to pay a *page charge* of \$85 per page (with a one page minimum) and an *article charge* of \$20 per article. The page charge (if honored) entitles the author to 100 free reprints. For Errata the minimum page charge is \$10, with no article charge and no free reprints. Nonpayment of the publication charge may lead to delay in publication.

**Timeliness and current importance of the subject matter,** and brevity and clarity of the presentation determine the acceptability of contributions. Feasibility studies and mere proposals for future research seldom meet the criteria for acceptability. Contributions lacking the element of urgency may be acceptable as Communications in the *Journal of Applied Physics*. Each Letter should be reasonably self-contained, and may on occasion be followed by a comprehensive report in the *Journal of Applied Physics* or elsewhere. Results of an extended research program should not be presented as a series of Letters in place of a comprehensive article.

**Manuscripts** should normally be planned to occupy two journal pages or less, and must include an abstract limited to about 100 words. In addition to the title, abstract, and references, two pages permit about 1800 words of text, reduced however by allowances for equations, tables, and figures. An average one-column figure with its caption will displace about 220 words of text. In some cases a longer manuscript may be

justified, but a Letter may never exceed three journal pages. Authors are cautioned that discovery of excess length might not occur until a late stage in publication and would then result in delay and expense. Circumvention of the length limitation by division of a long article into smaller parts is considered to be contrary to the purposes of this journal.

Instructions for preparation of manuscripts will be found in most issues of this journal. In brief and incomplete summary: Two copies of the manuscript, including clear copies of the figures, are required double spaced throughout on one side of 21.6 × 28 cm (8½ × 11 in.) paper. The original should be retained by the author until it is requested, after review. The *abstract, references, figure captions, and tables* are similarly to be double spaced, each on its separate sheets. The original *figures* should be original line drawings or high-contrast glossy prints not larger than 21.6 × 28 cm and should be included with the original submission. *References* should conform to the style used in AIP journals, including this one. Unusual mathematical symbols should be clarified with marginal notes.

**AIP's Physics Auxiliary Publication Service (PAPS)** is a low-cost depository for material which is part of and supplementary to a published paper, but is too long to be included in the journal; inquire of the Editor.

**Proof and all correspondence** concerning papers in the process of publication should be addressed to: Editorial Supervisor, *Applied Physics Letters*, American Institute of Physics, 335 East 45 Street, New York, NY 10017-3483. In all correspondence reference should be made to title, author, journal, and scheduled date of issue. A limited number of alterations in proof are unavoidable, but the cost of making extensive alterations after the article has been set in type will be charged to the author.

**Copyright 1986,** American Institute of Physics. Individual teachers, students, researchers, and libraries acting for them are permitted to make copies of articles in this journal for their own use in research or teaching, including multiple copies for classroom or library reserve use, provided such copies are not sold. Copying for sale is subject to payment of copying fees. (See "Copying Fees" paragraph elsewhere in this journal.) Permission is granted to quote from this journal with the customary acknowledgment of the source. To reprint a figure, table, or other excerpt requires in addition the consent of one of the original authors and notification to AIP. Reproduction for advertising or promotional purposes, or republication in any form, is permitted only under license from AIP, which will normally require that the permission of one of the authors also be obtained. Direct inquiries to Office of Rights and Permissions, American Institute of Physics, 335 East 45 Street, New York, NY 10017-3483.

## Information for Contributors

Send manuscripts to the Editor, Gilbert J. Perlow, *Applied Physics Letters*, Argonne National Laboratory, P.O. Box 296, Argonne, Ill. 60439.

For general format and style consult recent issues of the journal and the current revised edition of the American Institute of Physics *Style Manual* (which may be obtained for \$7.50 from: American Institute of Physics, 335 East 45th Street, New York, N.Y. 10017).

The **Manuscript**, including the abstract, references, and captions should be neatly typed in English, *double-spaced* on one side only of good letter-size 21.6 × 28-cm (8½ × 11-in.) white paper with ample margins. Unclear or excessive handwritten insertions are not acceptable. All pages should be numbered in a single sequence beginning with the title and abstract pages. As most manuscripts require revision and little is gained by mailing the original back and forth, authors should at first submit only *two clear copies of the original* including clear copies of the figures. The original typescript, suitably revised, should be submitted only *after* receiving the reviewer's report and the editor's instructions. However, include the originals of the figures at the time of the first submission.

**Manuscripts** should normally be planned to occupy two journal pages or less, and must include an abstract. In addition to the title, abstract and references, two pages permit about 1800 words of text, reduced however by allowances for equations, tables, and figures. An average one-column figure with its caption will displace about 220 words of text. In some cases a longer manuscript may be justified, but a Letter may never exceed three journal pages. Authors are cautioned that discovery of excess length might not occur until a late stage in publication and would then result in delay and expense.

The **Title** should be concise but informative enough to facilitate information retrieval. The **Abstract** should be limited to about 100 words and should be self-contained (contain no footnotes). It should be adequate as an index (giving all subjects, major and minor, about which new information is given) and as a summary (giving the conclusions and all results of general interest in the article).

**Author's names** should preferably be written in a standard form for all publications to facilitate indexing and avoid ambiguities.

**Equations** should be neatly typed or written in ink, punctuated and aligned to bring out their structure, and numbered on the right. Mathematical operation signs indicating continuity of the expression should be placed at the left of the second and succeeding lines. Use × rather than a centered dot, except for scalar products of vectors. The solidus (/) should be used instead of built-up fractions in running text, and in display wherever clarity would not be jeopardized. Use "exp" for complicated exponents.

**Notation** must be legible, clear, compact, and consistent with standard usage. All unusual or handwritten symbols whose identity may not be obvious must be identified in the margin the first time they appear, and at all subsequent times when confusion might arise. Superscripts are normally set directly over subscripts; authors should note where readability or the meaning requires a special order. If there is any possibility of confusion, indicate superscripts by a black penciled  $\nu$  underneath the superscript and subscripts by a black penciled  $\Lambda$  over the subscript.

**References and footnotes** are treated alike. They must be numbered consecutively in order of first appearance in the text and should be given in a separate double-spaced list at the end of the text material. Reference should be made to the full list of authors rather than to first author followed by an abbreviation such as *et al.* References within tables should be designated by lower case Roman letter superscripts and given at the end of the table. For the proper form, see the *AIP Style Manual* and recent issues of this journal. The number of a grant or contract is meaningless to our readers and should be omitted unless its inclusion is required by the agency that supports the research.

Separate **tables** (numbered in the order of their appearance by Roman numerals) should be used for all but the simplest tabular material; they should have captions that make the tables intelligible without reference to the text. The structure should be clear, with simple column headings giving all units. Unaltered computer output and notation are generally unacceptable.

**Figures** should not be larger than and preferably approximately the same size as the typewritten page so that they can be contained in ordinary mailing envelopes. Smaller figures are less likely to be lost if pasted on paper of this size. Figures should be planned for the 8.5-cm (3⅜-in.) column width of the journal. In some cases where the figures contain a great deal of detail 1½ or 2 columns may be used, at the copy editor's discretion. The lettering and plotted points on the figures should be large and clear enough so that they will be legible after reduction (their final size should be no less than 2 mm). Figures should be identified on the back by their number, the name of the first author, and the journal. The numbering should be in the order in which they are referred to in the text. Each figure must have its own caption; list captions on a separate sheet. Graphs should have properly labeled axes with correctly abbreviated units (see *AIP Style Manual*). The form  $R \times 10^3 \Omega$ , for example, is ambiguous and undesirable; use either  $R (10^3 \Omega)$  or  $10^{-3} R (\Omega)$ .

Maximum black-white contrast is necessary. We require original India-ink drawings or good clear glossy prints. Avoid small open symbols which tend to fill in upon reduction, small dots and decimal points, and lines that are not thick enough to withstand reduction. Avoid photographs of apparatus by providing schematic line diagrams instead, and replace oscillograph photographs by black-ink tracings wherever possible. For complete instructions see the *AIP Style Manual*.

The Editor strongly prefers to correspond directly with the author rather than through the reports division or through executives of the author's laboratory. Manuscripts returned to authors for revision should be returned to the Editor within three months. A manuscript returned later than this will generally be regarded as newly submitted and will receive a new receipt date.

Authors whose manuscripts have been accepted for publication will receive a letter informing them of the issue for which it is tentatively scheduled. *All subsequent correspondence* about the paper should be addressed to Supervisor, APL, Editorial Department, American Institute of Physics, 335 East 45th Street, New York, N.Y. 10017. Please *do not* address correspondence about proof, reprints, return of art work, publication charges, etc., to the Editor. To do so simply delays the appropriate action and reply.

General information regarding publication charges, copyrights, and similar material may be found on the Journal Page of each issue.

Use this checklist to avoid the most common mechanical errors in submitted manuscripts.

1. The manuscript must be double-spaced *throughout*, typed on one side of the paper only.
2. Number *all* pages in sequence.
3. Type *title* and *abstract* on a separate first page.
4. Type list of *references*, list of *figure captions*, and *tables* on pages separate from each other and from the main text.
5. Type *references* in the style used by AIP journals.
6. Provide marginal notes to clarify symbols and expressions for the compositor.
7. The original figures must be India ink line drawings or high-contrast, glossy prints not larger than 21.6 × 28 cm.
8. Retain original manuscript until requested, but submit (a) two clear copies (typed on one side of the paper only) with clear copies of figures and (b) the original figures.
