knowledge of the  
science underlying  
modern technology.**

# JOURNAL OF APPLIED PHYSICS

**Journal of Applied Physics** is published semimonthly and covers experimental and theoretical physics as applied to all aspects of materials. You'll find particular emphasis on semiconductors; superconductivity; defects in crystals; surfaces, interfaces, and thin films; plasma and gas discharges; applied biophysics; and the electronic and magnetic properties of condensed matter.

A key component of **JAP** is **Applied Physics Reviews**, which features articles covering important current research topics in applied physics and applications to physics from other fields of science and engineering. These review articles vary in length from short, authoritative summaries to comprehensive, critical, monograph-length reviews of specific applications.

<http://ojps.aip.org/jap>

Interfacial electronic structure for Ca and an electroluminescent polymer: Poly (2,5-diheptyl-1,4-phenylene-alt-2,5-thienylene)

*Aparna Rajagopal et al.*, 87, 1331  
(1 February 2000)

Effect of intermixing on self-propagating exothermic reactions in Al/Ni nanolaminate foils

*A. J. Gavens et al.*, 87, 1255 (1 February 2000)

Dielectric response in pulsed laser ablated (Ba,Sr)TiO<sub>3</sub> thin films

*S. Saba and S. B. Krupanidbi*, 87, 849  
(15 January 2000)

Electromigration-driven shape evolution of two-dimensional voids

*M. Schimschak and J. Krug*, 87, 695  
(15 January 2000)

Photorefractive holographic contrast enhancement via increased birefringence in polymer composites containing electro-optic chromophores with different alkyl substituents

*Mark D. Rahn, David P. West, and John D. Shalos*, 87, 627 (15 January 2000)

Hafnium and zirconium silicates for advanced gate dielectrics

*G. D. Wilk, R. M. Wallace, and J. M. Anthony*, 87, 484  
(1 January 2000)

Measurement of strain in Al-Cu interconnect lines with x-ray microdiffraction

*H. H. Solak et al.*, 86, 884 (15 July 1999)

Diffusion of Cd in GaAs and its correlation with self-diffusion on the Ga sublattice

*G. Bösker et al.*, 86, 791 (15 July 1999)

Resonance radiation transport in inhomogeneous media: Cylindrical glow discharges

*J. J. Curry, J. E. Lawler, and G. G. Lister*, 86, 731  
(15 July 1999)

Differential gain, differential index, and linewidth enhancement factor for a 4  $\mu\text{m}$  superlattice laser active layer

*S. A. Anson et al.*, 86, 713 (15 July 1999)

Influence of the spatial laser intensity distribution on laser nitriding of iron

*F. Landry, K.-P. Lieb, and P. Schaaf*, 86, 168  
(1 July 1999)

Self-consistent microwave field and plasma discharge simulations for a moderate pressure hydrogen discharge reactor

*K. Hassouni, T. A. Grotjohn, and A. Gicquel*, 86, 134 (1 July 1999)

Solder reaction-assisted crystallization of electroless Ni-P under bump metallization in low cost flip chip technology

*J. W. Jang et al.*, 85, 8456 (15 June 1999)

Modeling of the transient enhanced diffusion of boron implanted into preamorphized silicon

*E. Lampin, V. Senez, and A. Claverie*, 85, 8137  
(15 June 1999)

The significance of oxygen-deficient defects to the photo-sensitivity of hydrogen-loaded germano-silicate glass

*A. D. Heaney, T. Erdogan, and N. Borrelli*, 85, 7573 (1 June 1999)

Ultrashort-pulse laser machining of dielectric materials

*M. D. Perry et al.*, 85, 6803 (1 May 1999)

Foucault imaging of superconducting fluxons

*T. Yoshida et al.*, 85, 4096 (15 April 1999)

Mechanism of grain size refinement of Fe<sub>3</sub>B/Nd<sub>2</sub>Fe<sub>14</sub>B nanocomposite permanent magnet by Cu addition

*D. H. Ping et al.*, 85, 2448 (15 February 1999)

Ultrafast shock-induced orientation of polycrystalline films: Applications to high explosives

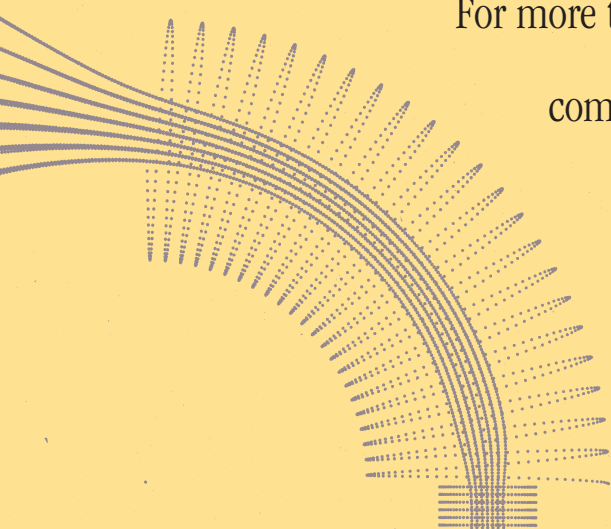

*Jens Franken, Selezion A. Hambir, and Dana D. Dlott*, 85, 2068 (15 February 1999)

Nonlinear luminescence spectroscopy in a Pt:ethynyl compound

*T. J. McKay et al.*, 85, 1337 (1 February 1999)

Optical heterodyne detection at a silver scanning tunneling microscope junction

*T. Kokubo, Alan Gallagher, and J. L. Hall*, 85, 1311 (1 February 1999)

For more than 40 years, the  
companion publications

**Journal of Applied  
Physics (JAP) and  
Applied Physics  
Letters (APL) have**

been recognized as the premier sources for applied research that significantly impacts the fields of physics, engineering, and materials science. In ISI's 1998 ranking of the most highly cited journals in applied physics, **APL** and **JAP** finished first and second respectively, with nearly three times as many citations as the third ranked journal! Pick up a copy of either journal today and you'll discover valuable articles offering vital new results — articles that substantially advance our knowledge in a broad range of scientific disciplines.

### **Select Articles—FREE on the Web**

---

**JAP** and **APL** have always been responsive to the needs of scientists who seek details of the latest applied physics research. A new way in which we are providing researchers with results from these two journals is through free article Web sites. Just visit each journal's online and you can access and download — at no cost — a sampling of articles from recent issues. These top-notch articles, listed below, exemplify the diversity of topics covered by the journal and can be read and saved with a few clicks of your mouse.

## Access a World of Applied Physics Research Online

---

**A**IP helped pioneer the rapid delivery of information online. In 1994, Applied Physics Letters Online became the first online version of an established physics publication. As our online capabilities have evolved, we've added many new features and more options for identifying, acquiring, using, and storing data.

To help you reach beyond the pages of **Applied Physics Letters** and **Journal of Applied Physics** — even beyond the pages of all AIP journals — we've developed powerful enhancements to let you:

**Browse** . . . Pour over the contents of any issue of **JAP** or **APL** — even if you don't subscribe. You can also follow links to abstracts, including those from future issues, several weeks prior to print publication. Subscribers can access an article's full text and non-subscribers can purchase articles online for immediate delivery.

**Search** . . . From Simple to Advanced Search, you have a variety of options to get the results you need. Search by topic, word, or author, and refine your searches by including dates, selecting a portion of a bibliographic record (e.g. title, author, affiliation).

**Link from Citations to Abstracts** . . . Now you can follow the trail of research as never before. Just click on a citation and you'll link to the referenced article's abstract online at AIP or in databases such as ISI's Web of Science, INSPEC, SPIN, and MEDLINE. If you subscribe to a referenced journal on AIP's OJPS platform, citations will also link to the full text of any article available online.

**Collect Articles** . . . Create your own "personal library" by browsing or searching titles, abstracts, and other bibliographic data from the journals available on our online platform. Just click on the article that interests you and store it in a virtual filing cabinet. You can read the article's abstract free of charge and, if you're a subscriber, you can access its full text. If you aren't a subscriber, you can purchase the complete article for immediate online delivery.

**Take Advantage of Vital Supplementary Research** . . . Now you can enjoy direct links from **JAP** and **APL** to AIP's exclusive Electronic Physics Auxiliary Publication Service (EPAPS), which stores a wealth of supplemental information, not included in the printed journal. EPAPS also boasts multimedia capabilities that capture graphics, sound, and real-time simulations.

**Link to Primary Publishers** . . . You can now follow reference links to Society publishers, including the American Society of Civil Engineers, APS, OSA, AVS, and SPIE. AIP is also part of the reference linking service, CrossRef, which offers links to more than three million articles in thousands of scientific journals. In addition, more than half a million more articles will be linked each year. Participants include Academic Press, Association for Computing Machinery, Blackwell Science, Elsevier Science, IEEE, Institute of Physics Publishing, John Wiley & Sons, Inc., Nature Publishing Group, Oxford University Press, Springer-Verlag, The University of Chicago Press, and World Scientific.

**View Abstracts** . . . Even non-subscribers can read the complete abstract of a selected article — including authors, affiliations, Physics and Astronomy Classification Scheme (PACS) codes, and page numbers.

**Receive Documents Online** . . . Now you can order complete articles from AIP journals and other Society journals to which you do not subscribe — for up to 50% less than other document delivery services. Simply place your credit card order on our secure online system. Articles you purchase can be viewed immediately and saved to your hard drive.

**Access a Variety of Formats** . . . In addition to PDF and PostScript formats, you can now view articles from **Applied Physics Letters** and **Journal of Applied Physics** in HTML with active "in text" links to equations, tables, figures, and references. You can print and download separately the figures, tables, and sections of these articles without additional software or plug-ins.

# APPLIED PHYSICS LETTERS

**APL** has long been an indispensable forum for rapidly unfolding physics research. Coverage spans applications of physics phenomena to all branches of science, engineering, and modern technology, and emphasizes key new developments in rapidly evolving fields such as, nanotechnology, semiconductor lasers, magnetic devices, and applied biophysics.

**APL** also presents timely reports of critical new experimental and theoretical research in lasers, optics, plasmas and electrical discharges, semiconductors, superconductivity, dielectrics and ferroelectricity, device physics, and much more.

Biomolecular recognition using submicron laser lithography.

*G. V. Shivashankar and A. Libchaber, 73, 417 (20 July 1998)*

Organic smart pixels

*A. Dodabalapur et al., 73, 142 (13 July 1998)*

Dynamic nucleation of ice induced by a single stable cavitation bubble.

*K. Ohsaka and E. H. Trinh, 73, 129 (6 July 1998)*

Low-cost all-polymer integrated circuits.

*C. J. Drury et al., 73, 108 (6 July 1998)*

## Save with Online Journal Subscriptions

---

AIP now offers online subscriptions to both libraries and individuals at savings ranging from 20% to more than 40%. Those outside the U.S. save even more, as there are no shipping costs associated with online editions. AIP also offers librarians an expanded choice of online combination packages. These can help cut costs while adding titles to an institution's collection.

## Top-Flight Editorial Guidance

---

As the editors of **Journal of Applied Physics** and **Applied Physics Letters** respectively, Drs. Steven J. Rothman and Nghi Q. Lam have guided these publications to their current position as the world's preeminent journals in applied physics. Both editors are aided by international editorial boards whose collected expertise spans the broad range of subfields featured in the journals.

## Submit Your Research to the Preeminent Journals in Applied Physics

Timely review and prompt publication of accepted manuscripts are just two reasons why top researchers choose to publish their work in **Journal of Applied Physics** and **Applied Physics Letters**. In addition, worldwide online and print distribution networks ensure the broad dissemination of your work in these highly cited journals.
