$$\times \{\Psi_{11}^{-1}(x, \lambda) \Psi_{11}(x, \lambda') \Phi_{12}^{-1}(x, \lambda') \Phi_{21}(x, \lambda)\}$$

Journal of Mathematical Physics

*Bringing you
fundamental
mathematical
developments and
applications to
physical systems.*

From quantum physics and particles and fields to classical mechanics, relativity, and gravitation, Journal of Mathematical Physics

(JMP) delivers a high-quality mix of research that no other mathematical physics journal can match. Unmatched as well is the journal's breadth of coverage. Pick up any issue and you'll also discover authoritative coverage of statistical physics, stochastic processes, dynamical systems, and fluid mechanics.

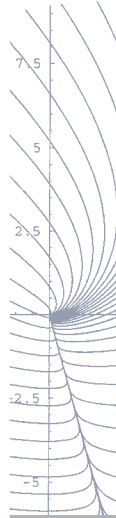

JMP brings you important original research that meets the highest standards of peer review. The journal presents new developments in mathematical methods suitable for the solution of physical problems. Original articles place their research in the appropriate context, in terms of physics and/or mathematics, then follow with the specific approach taken.

Expand Your Access to Vital Information

To help you reach beyond the pages of *Journal of Mathematical Physics*—even beyond the pages of all AIP journals—we've developed many powerful enhancements to our Online Journal Service (OJS) that let you:

- Link from reference lists to thousands of abstracts in databases such as INSPEC, SPIN, and Web of Science. Citations will also link to the full text of any AIP journal to which you subscribe.
- Collect articles for future use from OJS journals. Just click on an article that interests you, and store it in a virtual filing cabinet.
- Enjoy direct links from *JMP* articles to AIP's exclusive Electronic Physics Auxiliary Publication Service (EPAPS). This service stores a wealth of tabular information, which, for space considerations, could not be printed in the journal. EPAPS also boasts multimedia capabilities that capture sight and sound in real-time simulations.
- Link to major science publishers such as EDP Sciences, Springer-Verlag, Institute of Physics Publishing (UK), John Wiley, and Elsevier Science. You'll enjoy access to abstracts and, if you subscribe to a particular journal, the full text of articles from that journal. Links to many more publishers will be available soon.

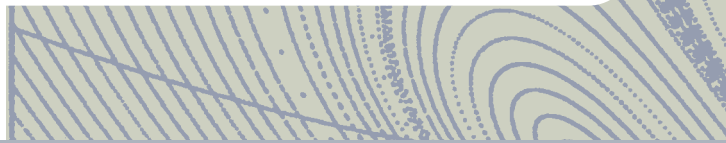

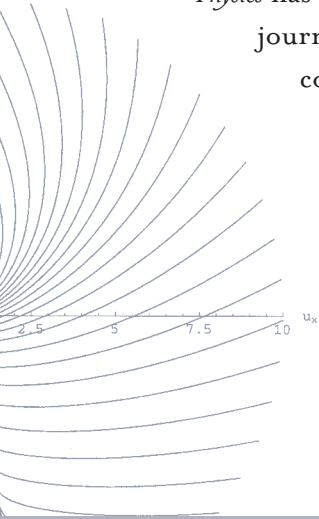

Select Articles—FREE on the Web

Journal of Mathematical Physics has always responded rapidly to the needs of scientists who seek details of the latest research. Now we can help you obtain those results faster than ever before. Just visit the journal's Web site at <http://ojps.aip.org/jmp> and you can access and download—at no cost—some articles from recent *JMP* Special Issues. These issues are published annually and provide in-depth studies of particular topics ranging from electron transport in solids to statistical mechanics to elementary particle theory. These top-notch articles exemplify the diversity of topics covered by the journal and can be read and saved with a few clicks of your mouse.

Access Even More Mathematical Physics Research Online

Since AIP's Online Journal Service (www.aip.org/ojs/service.html) began in January 1997, a print subscription to *Journal of Mathematical Physics* has connected users to a powerful Web edition of the journal at no additional charge. The electronic version contains full-text articles, hyperlinked references, abstracts in key databases, and more.

We will continue to include online access with print subscriptions. We've also "unbundled" the online edition and offer it separately at a significantly reduced price.

$$(x, \lambda') \Phi_{2j}(x, \lambda) - \Psi_{12}^{-1}(x, \lambda) \Psi$$

Wavelet and Time-Frequency Analysis

Volume 39 • Number 8 • August 1998

A general theorem on square-integrability: Vector coherent states
S. T. Ali, 39, 3954 (1998)

Wavelet transforms and discrete frames associated to semidirect products
P. Aniello, G. Cassinelli, E. De Vito, and A. Levvero, 39, 3965 (1998)

Continuous wavelet transforms with Abelian dilation groups
H. Führ, 39, 3974 (1998)

Wavelets on the n-sphere and related manifolds
J.-P. Antoine and P. Vandergheynst, 39, 3987 (1998)

Weighted trace formula near a hyperbolic trajectory and complex orbits
T. Paul and A. Uribe, 39, 4009 (1998)

Separability, positivity, and minimum uncertainty in time-frequency energy distributions
P. Flandrin, 39, 4016 (1998)

Quantum Problems in Condensed Matter Physics

Volume 38 • Number 4 • April 1997

Spectral theory of thermal relaxation
V. Jaki and C.-A. Pillet, 38, 1757 (1997)

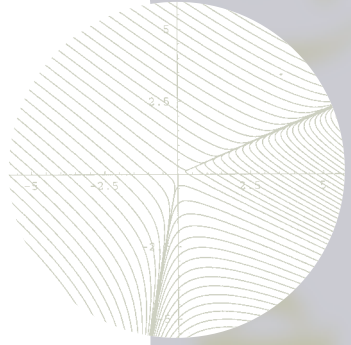

Twisted boundary conditions and transport in disordered systems
E. Akkermans, 38, 1781 (1997)

Spectral correlations in the crossover between GUE and Poisson regularity: On the identification of scales
T. Guhr and A. Müller-Groeling, 38, 1870 (1997)

With the online version of *JMP* you can:

- **Browse** the contents of any issue of the journal from 1997 onward, follow links to abstracts and complete articles, and browse the tables of contents of future issues up to three weeks prior to publication.
- **Search** by title, keyword, author, and among other options, further refine searches by including a range of publication dates. Your search options extend further than *JMP* and include all AIP and Member Society journals in the SPIN database.

$$21(x, \lambda') \Phi_{k1}^{-1}(x, \lambda') \Phi_{1j}(x, \lambda)$$

Spatial structure of anomalously localized states in disordered conductors
A. D. Mirlin, 38, 1888 (1997)

Density matrices for itinerant and localized electrons with and without external fields
N. H. March, 38, 2037 (1997)

Off-diagonal long range order and superconductive electrodynamics
G. L. Sewell, 38, 2053 (1997)

Mesoscopic Physics

Volume 37 • Number 10 • October 1996

Mesoscopic phenomena in semiconductor nanostructures by quantum design
F. Capasso, J. Faist, and C. Sirtori, 37, 4775 (1996)

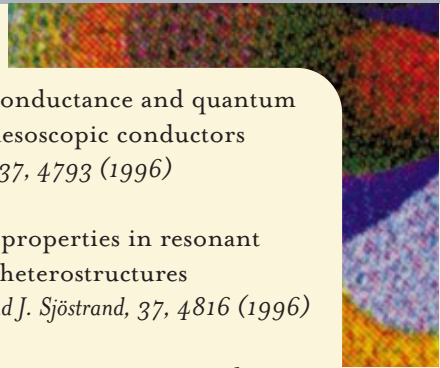

Dynamic conductance and quantum noise in mesoscopic conductors
M. Büttiker, 37, 4793 (1996)

Transport properties in resonant tunneling heterostructures
C. Presilla and J. Sjöstrand, 37, 4816 (1996)

Electron counting statistics and coherent states of electric current
L. S. Levitov, H. Lee, and G. B. Lesovik, 37, 4845 (1996)

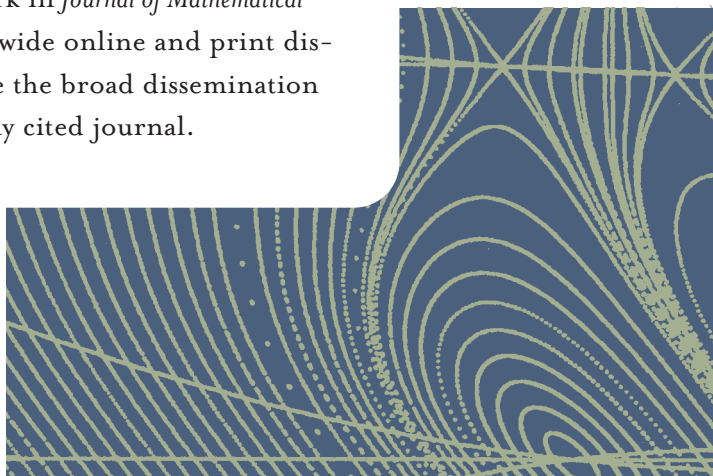

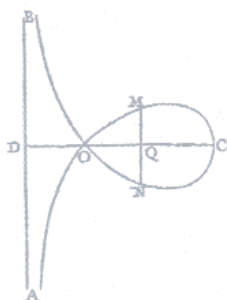

Bound states and scattering in quantum waveguides coupled laterally through a boundary window
P. Exner, P. Seba, M. Tater, and D. Vank, 37, 4867 (1996)

S-matrix, resonances, and wave functions for transport through billiards with leads
S. Albeverio, F. Haake, P. Kurasov, M. Ku, and P. Seba, 37, 4888 (1996)

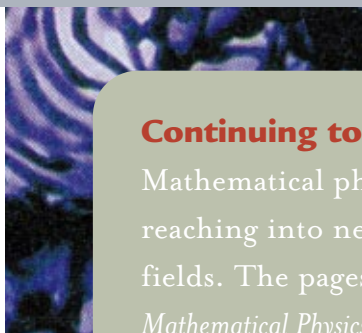

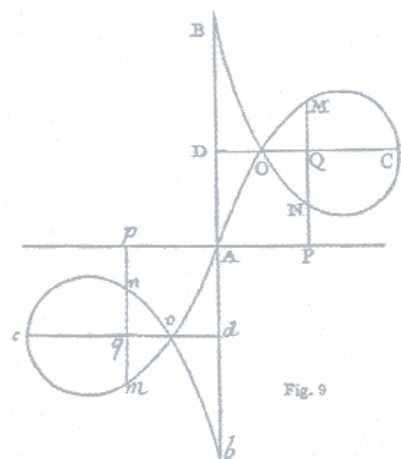

Submit Your Research to the Preeminent Journal in Mathematical Physics

Timely review and prompt publication of accepted manuscripts are just two reasons why top researchers chose to publish their work in *Journal of Mathematical Physics*. In addition, worldwide online and print distribution networks ensure the broad dissemination of their work in this highly cited journal.

$$\times \{ \Psi_{11}^{-1}(x, \lambda) \Psi_{11}(x, \lambda') \Phi_{k2}^{-1}($$

Continuing to Grow

Mathematical physics is quickly reaching into new and emerging fields. The pages of *Journal of Mathematical Physics* bristles with this energy and makes it today's finest forum for sound, scholarly research in this thriving field.

Library Recommendation Form

Attention Librarian\Department Head, I recommend that our institution:

- Subscribe to *Journal of Mathematical Physics*, 2000 • Volume 41 (12 issues)
ISSN 0022-2488

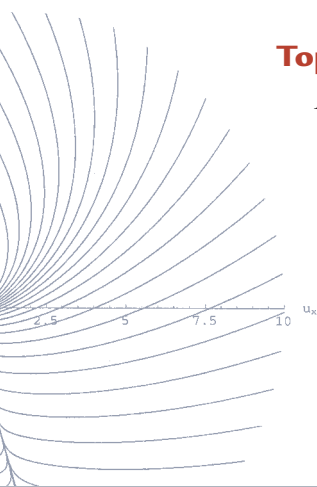

Name (please print) _____

Department _____

Signature _____

Please forward this brochure to your librarian.

Top-Flight Editorial Guidance

As Editor of *Journal of Mathematical Physics*, Dr. Roger Newton of Indiana University has guided the publication to its current position as the world's preeminent journal in mathematical physics. Dr. Newton is aided by an Editorial Board whose collected expertise spans the broad range of subfields featured in the journal. This international group of distinguished mathematical physicists play a crucial role in guiding editorial policy.
