This article displays winning photographs from the sixth Annual Fluid Mechanics Photo Contest held at the November 1988 meeting of the American Physical Society, Division of Fluid Dynamics, Buffalo, New York.

INTRODUCTION

The sixth Annual Fluid Mechanics Photo Contest, held at the November 1988 meeting of the American Physical Society, Division of Fluid Dynamics, in Buffalo, New York, attracted 24 entries, including flow visualizations from experiments and from computational simulations, covering a broad range of fluid mechanics problems. For the third year videotape presentations were included and for the first time an animation was entered. Continued participation in this contest is attributed to the successful appearance of articles such as this in *Physics of Fluids A*. Again we must thank the Editor of this Journal, without whose continued generosity and interest this would be impossible.

At the November American Physical Society meeting, entrants are displayed in a poster and video gallery and are judged by a distinguished international panel, with the decisions based on both the artistic beauty of the visualization and the original contribution to the understanding of fluid

mechanics. Meeting participants have commented that the gallery is enjoyable and offers a relaxing change from the hectic schedule of the regular paper sessions. Spectators browse and marvel at the wonders of fluid flow and at the same time learn about the most current techniques of flow visualization and display.

This article displays the winning photographs from this past November meeting in Buffalo; ten prize winners were selected in 1988. Each entry is complemented by a descriptive passage and in some cases, the posters and videotapes have been condensed for this publication. Of worthy note is the inclusion of color photographs from the original posters and videotapes in this article to enhance the display.

The tradition will continue at the November 1989 meeting of the American Physical Society, Division of Fluid Dynamics, in Palo Alto, California, and the winners will be considered for publication in *Physics of Fluids A* in this format, with strong preference being given to original work.
