This article displays winning photographs from the ninth Annual Fluid Mechanics Photo Contest held at the November 1991 meeting of the American Physical Society, Division of Fluid Dynamics, Scottsdale, Arizona.

### INTRODUCTION

The ninth Annual Fluid Mechanics Photo Contest, held at the November 1991 meeting of the American Physical Society, Division of Fluid Dynamics, in Scottsdale, Arizona, attracted 75 entries, including flow visualizations from experiments and from computational simulations, covering a broad range of fluid mechanics problems. Continued participation in this contest is attributed to the successful appearance of articles such as this in *Physics of Fluids A*. Again we must thank the editor of this Journal without whose continued generosity and interest this would be impossible.

At the November American Physical Society meeting, entrants are displayed in a poster and video gallery and are judged by a distinguished international panel, with the decisions based on both the artistic beauty of the visualiza-

tion and the original contribution to the understanding of fluid mechanics. Meeting participants have commented that the gallery is enjoyable and offers a relaxing change from the hectic schedule of the regular paper sessions. Spectators browse and marvel at the wonders of fluid flow and also at the same time learn about the most current techniques of flow visualization and display.

This article displays the 11 winning photo displays from this past November meeting in Scottsdale. Each entry is complemented by a descriptive passage and in some cases, the posters and videotapes have been condensed for this publication.

The tradition will continue at the November 1992 meeting of the American Physical Society, Division of Fluid Dynamics, in Tallahassee, Florida, and the winners will be considered for publication in *Physics of Fluids A* in this format, with strong preference being given to original work.
